

# CLIMATE CHANGE RISKS AND OPPORTUNITIES IN THE EAST AFRICAN GRAIN VALUE CHAIN

## OUR VISION

A climate-resilient community of female and male grain stakeholders who use climate information to increase grain production, reduce losses, and improve market access for food security and improved livelihoods.

## WHY FOCUS ON POST-HARVEST LOSSES?

According to the African Postharvest Losses Information System, up to a quarter of grain is lost between harvesting and consumption, caused by gaps in drying, storage and transport. In 2017 Kenya lost 4.5 million bags which was enough to feed the entire country for one-and-a-half months.

## WHAT WILL THIS INFOGRAPHIC ACHIEVE?

- Inform grain value chain actors of climate resilient farming, storage and distribution practices
- Improve the understanding of climate change impacts, and develop methods for mitigating these across the value chain
- Contribute to recommendations and proposals for improving food security that can be taken up by policy-makers

EASTERN AFRICA GRAIN COUNCIL

This work was carried out with the aid of a grant from the Ministry of Foreign Affairs of the Netherlands, the Ministry of Agriculture, Rural Development and Fisheries of the Government of Kenya, the International Development Research Centre (IDRC) of the Government of Canada, the International Development Research Centre (IDRC) of the Government of Canada, the International Development Research Centre (IDRC) of the Government of Canada, the International Development Research Centre (IDRC) of the Government of Canada.
